Estimated Breeding Values

While index based selection is important it is also crucial to look at individual trait EBVs for a ram and match them to your flock. Different rams can have the same terminal sire index but with different combinations of EBVs. It should be remembered that stock selection should be made on what pleases the eye and suits your flock and breeding system. Figures (EBVs) should be used as a tool to assist this selection and give supporting information about genetic influences that you cannot see.
Signet's new monthly, mixed breed analysis increases the commercial focus of existing traits and introduces a series of new EBVs.

Weight adjusted traits - Please note that carcase traits are now weight adjusted. This means that EBVs are a better prediction of carcase composition at a fixed weight as opposed to the previous method of adjusting for age.
