SCANNING OF IN LAMB EWES

All ewes sold in lamb or running with a ram will be scanned on the morning of the sale. The ewes will be sold on this scanning result only and in preference to any other scanning result the vendor may have obtained. Any empty ewes will be marked with a green mark and may still be sold as empty in same catalogue order. The Society accepts no responsibility for the accuracy of the scanning results although every effort will be made to ensure the results are inline with national averages.

Seller Comments: Westland Imperial, a fantastic ram with length, depth, power, muscle and style all in one sheep. His show record speaks for its self - reserve male champion and reserve breed champion at Three Counties and male champion and breed champion at the Great Yorkshire. and Breed Champion at Westmorland. We have taken a small amount of semen off this ram that will be retained for future use and will never be offered for sale. The decision to offer him for sale has not been taken lightly but as he is such a superb breeders ram we felt it was the right thing to do. This is the final opportunity to purchase a Westland ram. Estimated Breeding Values

While index based selection is important it is also crucial to look at individual trait EBVs for a ram and match them to your flock. Different rams can have the same terminal sire index but with different combinations of EBVs. It should be remembered that stock selection should be made on what pleases the eye and suits your flock and breeding system. Figures (EBVs) should be used as a tool to assist this selection and give supporting information about genetic influences that you cannot see.
Signet's new monthly, mixed breed analysis increases the commercial focus of existing traits and introduces a series of new EBVs.

Weight adjusted traits - Please note that carcase traits are now weight adjusted. This means that EBVs are a better prediction of carcase composition at a fixed weight as opposed to the previous method of adjusting for age.
