SCANNING OF IN LAMB EWES

All ewes sold in lamb or running with a ram will be scanned on the morning of the sale. The ewes will be sold on this scanning result only and in preference to any other scanning result the vendor may have obtained. Any empty ewes will be marked with a green mark and may still be sold as empty in same catalogue order. The Society accepts no responsibility for the accuracy of the scanning results although every effort will be made to ensure the results are inline with national averages.

Sired by the outstanding Treworthal Maximus who was the sire of the Royal Highland Show Champion 2024 and sire of the Female Champion and Reserve Breed at this year's National Show at Three Counties. Her Dam is the Mother of Treworthal Brexit, an amazing ram we exported to the Republic of Ireland, a 5 star ram - the best you can get in their rankings - he is top 2% terminal sire index in the country and has a -17.2 days to slaughter index! Service sire is Treworthal Spartan - the best ram lamb we have every bred - He was breed Champion at Devon County and Royal Cornwall where he went on to be Interbreed Ram Lamb Champion at both shows! Quite an achievement. His Twin sister was Female Champion at Devon County and Bath and West shows - to produce twins of this calibre is quite exceptional.

Estimated Breeding Values

While index based selection is important it is also crucial to look at individual trait EBVs for a ram and match them to your flock. Different rams can have the same terminal sire index but with different combinations of EBVs. It should be remembered that stock selection should be made on what pleases the eye and suits your flock and breeding system. Figures (EBVs) should be used as a tool to assist this selection and give supporting information about genetic influences that you cannot see.
Signet's new monthly, mixed breed analysis increases the commercial focus of existing traits and introduces a series of new EBVs.

Weight adjusted traits - Please note that carcase traits are now weight adjusted. This means that EBVs are a better prediction of carcase composition at a fixed weight as opposed to the previous method of adjusting for age.
